

## Collective Investment Funds

R2 Share Class

### Quarterly Update

At Horizon Investments, we utilize a multi-disciplined active asset allocation investment approach in managing our Active Funds with Risk Assist®. The management team has the flexibility to make changes as market conditions change in an attempt to capitalize on the opportunities the team finds attractive. In addition, we seek to mitigate downside risk through our Risk Assist® overlay. Risk Assist® is an active risk reduction strategy intended to protect against large declines in investment portfolios.

The Horizon Active Funds with Risk Assist® are collective investment funds ("CIFs") created by the Hand Composite Employee Benefit Trust and sponsored by Hand Benefits & Trust Company, a BPAS company, and managed by Horizon Investments, LLC, an SEC-registered investment advisor. Fund assets are custodied at Hilltop Securities.

The CIFs are not mutual funds. Shares are not deposits of Hand Benefits & Trust Company, a BPAS company, or Horizon Investments, LLC, and are not insured by the Federal Deposit Insurance Corporation or any other agency. Each CIF is a security that has not been registered under the Securities Act of 1933 and is exempt from investment company registration under the Investment Act of 1940.

Horizon Investments, LLC portfolios are subject to general market risk and risks related to economic conditions. The portfolios' underlying investments fluctuate in price and may be sold at a price lower than the purchase price resulting in a loss of principal. The underlying investments are neither FDIC insured nor guaranteed by the U.S. Government. There may be economic times where all investments are unfavorable and depreciate in value. The results portrayed herein reflect the reinvestment of dividends, the reinvestment of capital gains, stock splits and other earnings when appropriate and applicable. Horizon does not forecast future economic environments and cannot comment on how it might do in any future economic scenario. See below for the list of principal risks of investing in the CIF based on the strategy and underlying assets of the CIF's holdings.

Suitability - Investors are expected to select investments whose investment strategies are consistent with their financial goals and risk tolerance.

Active Management - The investment is actively managed and subject to the risk that the advisor's usage of investment techniques and risk analyses to make investment decisions fails to perform as expected, which may cause the portfolio to lose value or underperform investments with similar objectives and strategies or the market in general.

Hedging Strategies - The advisor's use of hedging strategies to reduce risk may limit the opportunity for gains compared with unhedged investments, and there is no guarantee that hedges will actually reduce risk.

Temporary Defensive Measures - Temporary defensive positions may be used during adverse economic, market, or other conditions. In this event, up to 100% of assets may be allocated to securities, including cash and cash equivalents that are normally not consistent with the investment objective.

Management - Performance is subject to the risk that the advisor's asset allocation and investment strategies do not perform as expected, which may cause the portfolio to underperform its benchmark, other investments with similar objectives, or the market in general. The investment is subject to the risk of loss of income and capital invested, and the advisor does not guarantee its value, performance, or any particular rate of return.

U.S. Government Obligations - Investments in U.S. government obligations are subject to varying levels of government support. In the event of default, some U.S. government securities, including U.S. Treasury obligations and Ginnie Mae securities, are issued and guaranteed as to principal and interest by the full faith and credit of the U.S. government. Other securities are obligations of U.S. government-sponsored entities but are neither issued nor guaranteed by the U.S. government.

Exchange Traded Fund ("ETF") - Investments in ETFs generally reflect the risks of owning the underlying securities they are designed to track, although they may be subject to greater liquidity risk and higher costs than owning the underlying securities directly because of their management fees. Shares of ETFs are subject to market trading risk, potentially trading at a premium or discount to net asset value.

Underlying Fund/Fund of Funds - A portfolio's risks are closely associated with the risks of the securities and other investments held by the underlying or subsidiary funds, and the ability of the portfolio to meet its investment objective likewise depends on the ability of the underlying funds to meet their objectives. Investment in other funds may subject the portfolio to higher costs than owning the underlying securities directly because of their management fees.

Loss of Money - Because the investment's market value may fluctuate up and down, an investor may lose money, including part of the principal, when he or she buys or sells the investment.

Market/Market Volatility - The market value of the portfolio's securities may fall rapidly or unpredictably because of changing economic, political, or market conditions, which may reduce the value of the portfolio.

The peer group and indices are shown for comparison purposes only and cannot be invested in directly. The Morningstar US OE Long/Short Equity (Morningstar U.S. Open End Long/Short Equity) peer group represents strategies that hold sizable stakes in both long and short positions in equities and related derivatives. Some funds that fall into this category will shift their exposure to long and short positions depending on their macro outlook or the opportunities they uncover through bottom-up research. Some funds may simply hedge long stock positions through exchange-traded funds or derivatives. While the use of short investments is not a primary investment strategy for Horizon's Risk Assist portfolios, we believe this peer group is representative of other risk mitigation strategies in the marketplace under Morningstar's current categorization options. The Morningstar Target Risk Index represents a portfolio of global equities, bonds, and traditional inflation hedges such as commodities and Treasury Inflation Protected Securities based on specific equity risk preferences. The Morningstar Target Risk Index utilizes asset allocation methodologies developed and maintained by Ibbotson Associates and is rebalanced quarterly. The Morningstar Target Risk Index was selected based on the CIF's stated target equity exposure. The S&P 500 TR Index (S&P 500 Total Return Index) is an unmanaged index that is generally considered representative of the U.S. stock market. The S&P 500 TR Index is the appreciation of the index as well as the reinvestment of all dividends. The Barclays U.S. Agg Bond Index (Barclays U.S. Aggregate Bond Index) is an unmanaged index that is generally considered representative of the U.S. bond market. The performance of an unmanaged index is not indicative of the performance of any particular investment. Blended benchmarks are rebalanced monthly. Individuals cannot invest directly in any index. Investments offering the potential for higher rates of return also involve a higher degree of risk. Actual results will vary.

Beginning on January 1, 2012, portfolio performance is calculated using model performance at Hand Benefit & Trust Company, a BPAS company, for the CIF. Beginning on June 1, 2012 portfolio performance for the Horizon Focused with Risk Assist and Conservation Plus with Risk Assist CIFs is calculated using actual performance from the NAV of the CIF. Beginning on January 1, 2013, portfolio performance for the Horizon Growth with Risk Assist, Moderate with Risk Assist, and Conservative with Risk Assist CIFs is calculated using actual performance from the NAV of the CIF. All performance is net of fees, 1.80% per annum deducted monthly.

Annual portfolio turnover rate is the average annual turnover since inception. Portfolio holdings were correct as of the most recent quarter end. Due to the dynamic nature of the portfolios, they will change, and should not be relied upon for trading decisions.
